PROGRAM REPORT

DATE: 23/11/2024

TITLE: Innovative Teaching Methodologies for Faculties - Workshop

DURATION: 02 - 04 PM

VENUE: NAAC ROOM

The faculty development program "Innovative Teaching Methodologies for Faculties - Workshop "began with a welcoming speech, Dr. S. Gowri demonstrated by using the Pear Deck platform for the tools Poll Everywhere, Crossword Maker, and QR Code Generator and Doctor Shipa demonstrated the tools Mentimeter and ChatGPT.

Program Overview:

The faculty development program aimed to introduce and familiarize participants with the below mentioned interactive digital tools designed to enhance communication, learning, and engagement. The tools presented were:

Polls Everywhere – An interactive polling and survey tool.

Crossword Maker – A tool for creating customized crosswords to promote learning.

QR Code Generator – A tool for generating QR codes for easy access to resources and information.

Mentimeter: A cloud-based tool for creating interactive presentations, polls, quizzes, and discussions. It is designed to help make teaching and meetings more engaging.

ChatGPT: A powerful AI language model by OpenAI that can assist in generating content, answering questions, providing summaries, and offering creative ideas, making it a versatile tool for faculties.

Polls Everywhere

To introduce Polls Everywhere as an interactive polling tool designed for real-time audience engagement. This tool allows users to create polls, surveys, and quizzes, which participants can answer using their mobile phones or computers.

How to create live polls, ask questions in real-time, and view results immediately.
Integration with PowerPoint and other presentation tools to seamlessly incorporate polls.
Various question formats (e.g., multiple choice, open-ended, word clouds).
Reviewing results and analyzing audience feedback post-event.
Practical Applications:
Engaging audiences in educational environments (e.g.,
Collecting real-time feedback during meetings and conferences.
Conducting quizzes and assessments in virtual or hybrid learning setups.
Participants were encouraged to create their own poll using the tool. Afterward, they conducted a live poll with the group, allowing them to explore how the interface works and how responses are collected and displayed.

Crossword Maker

To introduce a Crossword Maker tool that enables users to create customized crosswords for educational and entertainment purposes.

How to input clues and answers to create personalized puzzles.
Designing Puzzle Layouts: Options for adjusting the size and format of the crossword grid.
How to export the puzzle for printing or sharing digitally.
Embedding completed crosswords in websites or learning management systems.

Participants were divided into small groups and asked to create their own crossword puzzle related to a subject of their choice. They then shared their creations with the larger group and discussed how the tool could be applied in different educational contexts.

QR Code Generator

To introduce a QR Code Generator as a tool for creating quick and easy access points to digital content, such as websites, forms, videos, and other resources.

Creating QR Codes: How to generate QR codes linking to various types of content (URLs, contact information, event details).

Customization: Options to customize the design and color of QR codes for branding purposes.

Providing quick access to online learning materials, documents, and multimedia resources.

Participants were guided through the process of creating a QR code linking to a website or document of their choice. They then tested the QR codes by scanning them with their mobile phones and discussed ways they could use QR codes in their own work or educational environments.

Mentimeter

This session provides a guide on using Mentimeter in education, including creating live polls and surveys for student feedback, engaging students with quizzes for graded or formative assessments, and displaying students' thoughts as a word cloud. It also discusses the integration of Mentimeter slides into existing PowerPoint for brainstorming, collaborative decision-making, and group activities. The guide also discusses using in-class activities, conducting quizzes and polls, encouraging active participation, conducting pre-class and mid-lesson surveys, and providing post-class feedback for improved teaching

ChatGPT

ChatGPT is an AI chatbot developed by OpenAI that can perform various tasks, including content creation, student assistance, idea generation, summarizing texts, and automating repetitive tasks. It can generate syllabi, exam questions, lesson plans, and teaching materials, provide explanations or tutoring, brainstorm lesson ideas, summarize research papers, and assist in administrative tasks.

The orientation program successfully introduced participants to powerful digital tools—Polls Everywhere, Crossword Maker, Mentimeter, chatgpt and the QR Code Generator—each of which offers unique features to enhance learning, engagement, and interaction. The hands-on activities allowed participants to explore the tools in real time and gain practical experience in using them effectively.

At the end of the session, participants were asked to provide feedback on their experience with the tools, as well as how they plan to incorporate them into their work or educational environments. A follow-up survey will be sent out to gather further insights and assess the impact of the orientation program.
